

**DRAFT - DO NOT COPY - FOR DISCUSSION/FEEDBACK PURPOSES ONLY**

<b>Unit Title:</b> Acids and Bases	<b>Content Area:</b> Chemistry	<b>Grade Level:</b> 9-12
<p><b>Unit Summary:</b> Students will learn various definitions of acids and bases. Not only will each varying definition call on previous knowledge of chemistry to review for the final, but it is also an excellent unit for students to apply chemistry to daily life. In addition to the mathematical components of this unit, a heavy focus of this unit is on how we use acids and bases each day with a culminating discussion on acid rain and its implications. Topics covered in this unit are acid and base identification, pH scale, pH calculations, titration calculations, neutralization reactions (predicting products) and buffer solutions.</p> <p><b>Cross Cutting Concepts:</b></p> <p>2. Cause and effect: Mechanism and explanation. Events have causes, sometimes simple, sometimes multifaceted. A major activity of science is investigating and explaining causal relationships and the mechanisms by which they are mediated. Such mechanisms can then be tested across given contexts and used to predict and explain events in new contexts.</p> <p>5. Energy and matter: Flows, cycles, and conservation. Tracking fluxes of energy and matter into, out of, and within systems helps one understand the systems' possibilities and limitations.</p> <p><b>Science and Engineering Practice:</b></p> <p>4. Analyzing and interpreting data</p> <p>5. Using mathematics and computational thinking</p>		
<p><b>Unit Essential Questions:</b></p> <ul style="list-style-type: none"> <li>• What acids and bases are present in our homes, schools and jobs?</li> <li>• How is the strength of an acid or base measured, and how does that change its applications/uses?</li> <li>• How is an acid or base neutralized?</li> </ul>	<p><b>Unit Enduring Understandings:</b></p> <ul style="list-style-type: none"> <li>• Acids and bases are all around us. They are found in our foods, cleaning supplies, medicines, batteries and many other products.</li> <li>• Acid and base strength can be measured by the pH scale; a substance with a pH close to 14 is a base, a substance with a pH close to 1 is an acid, and substances with a pH of 7 are neutral.</li> <li>• When an acid and base combine it is called a neutralization reaction - water is produced and the resulting solution has a pH closer to 7 than either of the reactants.</li> </ul>	
<p><b>Possible Student Misconceptions:</b> Students often have the notion that acids are something that 'eats away' other substances. Not only is this definition incorrect, but it also leads students to think that bases are not as dangerous or do not deserve as much caution as acids. Be sure to clarify this misconception before letting students do any acid base activities or labs. Additionally, students often get bases and acids, their ions and pH calculations backwards. Study charts or graphic organizers may help students to organize this information. Another misconception is that students often assume that acids and bases are all liquids. Try to provide solid or gas examples throughout the unit to debunk this myth.</p>		
<p><b>NJCCCS:</b> 5.2.12.A.6 Acids and bases are important in numerous chemical processes that occur around us, from industrial to biological processes, from the laboratory to the environment. 5.2.12.B.2 A large number of important reactions involve the transfer of either electrons or hydrogen ions between reacting ions, molecules, or atoms. In other chemical reactions, atoms interact with one another by sharing electrons to create a bond.</p>		
<p><b>NGSS Performance Expectations:</b> <i>Students who demonstrate understanding can...</i></p> <p><b>HS-PS1-2.</b> Construct and revise an explanation for the outcome of a simple chemical reaction based on the outermost electron states of atoms, trends in the periodic table, and knowledge of the patterns of chemical properties</p> <p><b>HS-PS2-6.</b> Communicate scientific and technical information about why the molecular-level structure is important in the functioning of designed materials.</p> <p><b>ETS1.C:</b> Optimizing the Design Solution Criteria may need to be broken down into simpler ones that can be approached systematically, and decisions about the priority of certain criteria over others (trade-offs) may be needed. (secondary to HS-PS1-6)</p>		
<p><b>Primary CCSS ELA/Literacy Connections:</b> WHST.9-12.2 Write informative/explanatory texts, including the narration of historical events, scientific procedures/ experiments, or technical processes. (HS-PS2-6) RST.9-10.7 Translate quantitative or technical information expressed in words in a text into visual form (e.g., a table or chart) and translate information expressed visually or mathematically (e.g., in an equation) into words. (HS-PS1-1)</p>	<p><b>Primary CCSS Mathematics Connections:</b> MP.4 Model with mathematics. (HS-PS1-8) HSN-Q.A.1 Use units as a way to understand problems and to guide the solution of multi-step problems; choose and interpret units consistently in formulas; choose and interpret the scale and the origin in graphs and data displays. (HS-PS1-3),(HS-PS1-8),(HS-PS2-6) HSN-Q.A.3 Choose a level of accuracy appropriate to limitations on measurement when reporting quantities. (HS-PS1-3),(HS-PS1-8),(HS-PS2-6)</p>

	<p>are three different definitions of acids and bases. Depending on the level of your students you may choose not to present all three - or to teach them but only test a certain one. It also depends on pacing and the depth of understanding you'd like to achieve on this unit. The Holt textbook only discusses Arrhenius acid/bases and Bronsted-Lowery acid bases. It only briefly mentions Lewis acids/bases in a note in the TE. NOTE: the next lesson is on the pH scale and calculations so for the first lesson just introduce it as a scale with values that differentiate an acid from a base. This unit can be rearranged to better suit the needs of the teacher/classroom if this order does not work well. ALTERNATE ACTIVITY: This can also be done through an online simulation listed to the right if the gallery walk is not an option.</p>	<p>students.</p> <ul style="list-style-type: none"> <li>Acid-Base Simulation: <a href="http://phet.colorado.edu/en/simulation/acid-base-solutions">http://phet.colorado.edu/en/simulation/acid-base-solutions</a></li> </ul>		<p>certain criteria over others (trade-offs) may be needed. (secondary to HS-PS1-6)</p>	
<p><b><i>Explain: How will you help students connect their exploration to the concept/topic under investigation?</i></b></p>	<p>The class can be given notecards that say acids on one side and base on the other. As the teacher calls out a household item, a pH value or a property, students can hold up the card for acid or base. This gives students practice and an excellent way for the teacher to do a whole class check for understanding.</p>	<ul style="list-style-type: none"> <li>Video introducing acids, bases and salts. May be better used after neutralization is taught, but it is linked here and below: <a href="http://vitalnj.pbslearningmedia.org/resource/0b087bdd-72ff-46a1-83c7-41e50895715d/chemistry-1101-introduction-to-acids-bases-and-salts/">http://vitalnj.pbslearningmedia.org/resource/0b087bdd-72ff-46a1-83c7-41e50895715d/chemistry-1101-introduction-to-acids-bases-and-salts/</a></li> <li>Online Acid-Base Tutorial <a href="http://www.shodor.org/unchem/basic/ab/">http://www.shodor.org/unchem/basic/ab/</a></li> <li>Acid-Base Tutorial <a href="http://www.visionlearning.com/en/library/Chemistry/1/">http://www.visionlearning.com/en/library/Chemistry/1/</a></li> </ul>

Also, you can perform a buffer DEMONSTRATION	<ul style="list-style-type: none"> <li>Information on blood pH Holt Chemistry TE Pg. 561-562</li> <li>DEMONSTRATION Pg. 561 Holt Chemistry TE</li> </ul>			Stability and Change Much of science deals with constructing explanations of how things change and how they remain stable. (HS-PS1-6)

DRAFT - DO NOT COPY - FOR DISCUSSION/FEEDBACK PURPOSES ONLY

<p><b>Explore: What hands-on/minds-on common experience(s) will you provide for students?</b></p>	<p>Students must practice identifying conjugate acid/base pairs. After students are familiar with weak acids and their conjugate bases, play a class wide game of memory. Each student gets an index card with weak acid or conjugate acid or base. They place this face down on their desk. Students take turns one at a time crossing the room and flipping over a card of a classmate. They read it aloud to the class and decide if the two cards would make a buffer solution. If so, those two students earn a point. If not they flip their cards and return to their seats. This can be done in smaller groups so students get more practice.</p>				<p>Different patterns may be observed at each of the scales at which a system is studied and can provide evidence for causality in explanations of phenomena. (HS-PS1-2),</p>
<p><b>Explain: How will you help students connect their exploration to the concept/topic under investigation?</b></p>	<p>Direct Instruction Con't: The teacher must explain what happens to a buffer solution when an acid or base is added. Now that students have identified the parts of a buffer solution, they must understand how buffer solutions work. Take a sample pair of cards from the game and ask students what would happen in an acid was added? What would happen if a base was added? Have students pair up and write the neutralization reactions that would occur with a pair of cards from the game.</p>	<ul style="list-style-type: none"> <li>• How buffers work: <a href="http://chemcollective.org/activities/tutorials/buffers/buffers3">http://chemcollective.org/activities/tutorials/buffers/buffers3</a></li> <li>• pH and Buffers defined: <a href="http://chemcollective.org/activities/tutorials/buffers/buffers1">http://chemcollective.org/activities/tutorials/buffers/buffers1</a></li> </ul>	<p>Construct and revise an explanation based on valid and reliable evidence obtained from a variety of sources (including students' own investigations, models, theories, simulations, peer review) and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future. (HS-PS1-2)</p>	<p>PS 1.A Structure and Matter The fact that atoms are conserved, together with knowledge of the chemical properties of the elements involved, can be used to describe and predict chemical reactions. (HS-PS1-2),(HS-PS1-7)</p>	<p>Patterns. Different patterns may be observed at each of the scales at which a system is studied and can provide evidence for causality in explanations of phenomena. (HS-PS1-2) Stability and Change Much of science deals with constructing explanations of how things change and how they remain stable. (HS-PS1-6)</p>
<p><b>Elaborate: How will students apply their learning and develop a more sophisticated understanding of the concept/topic?</b></p>	<p>Give students time to research a buffer solution in their house in small groups - they can use class computers or even their phones if they pair up with students who have them. Have each group share their buffer solution with</p>		<p>Communicate scientific and technical information (e.g. about the process of development and the design and performance of a proposed process or system) in multiple formats (including orally, graphically, textually, and</p>		<p>Patterns. Different patterns may be observed at each of the scales at which a system is studied and can provide evidence for causality in explanations of phenomena. (HS-PS1-2),</p>
