

DRAFT - DO NOT COPY - FOR DISCUSSION/FEEDBACK PURPOSES ONLY

Unit Title: Life Cycle of Butterflies		Content Area: Life Science		Grade Level: 2	
<p>Unit Summary: The Life Cycle of Butterflies introduces students to the concepts of life cycles by inviting them to investigate one organism—the painted lady butterfly (<i>Vanessa cardui</i>) for eight weeks. As students care for the caterpillars and butterflies, they observe, record, and describe in words and drawings the metamorphosis from caterpillar to chrysalis and from chrysalis to butterfly. In many cases, students will get to see a butterfly lay eggs. Some butterflies will die natural deaths, completing students’ observations of the life cycle. Through these investigations, students will understand that the term “cycle” implies continuity and that life cycles exist for all living organisms. This experience deepens their understanding of the diversity and complexity of life on earth. [NJCCCS 5.3 Life Science: All students will understand that life science principles are powerful conceptual tools for making sense of the complexity, diversity, and interconnectedness of life on Earth. Order in natural systems arises in accordance with rules that govern the physical world, and the order of natural systems can be modeled and predicted through the use of mathematics.] The crosscutting concepts of patterns will be classification, which depends on careful observation of similarities and differences; objects can be classified into groups on the basis of similarities. Such classification is useful in codifying relationships and organizing a multitude of objects or processes into a limited number of groups. Students will recognize patterns in various life cycles and identify commonalities to the life cycle of the butterfly. Science & Engineering Practices: Constructing Explanations and Designing Solutions- Students will make use of evidence and ideas in constructing evidence-based accounts of natural phenomena and designing solutions. Obtaining, Evaluating, and Communicating Information-Students will use observations and texts to communicate new information.</p>					
<p>Unit Essential Questions:</p> <ul style="list-style-type: none"> • How do the properties of materials determine their use? • What do all living things have in common? • How is matter transformed, and energy transferred/transformed in living systems? • How do organisms change as they go through their life cycle? • In what ways are organisms of the same kind different from each other? • How does this help them reproduce and survive? 			<p>Unit Enduring Understandings:</p> <ul style="list-style-type: none"> • The structures of materials determine their properties. • Living organisms have a variety of observable features that enable them to obtain food and reproduce. • All organisms transfer matter and convert energy from one form to another. • Organisms reproduce, develop, have predictable life cycles, and pass on some traits to their offspring. • Sometimes differences between organisms of the same kind give advantages in surviving and reproducing in different environments. 		
<p>Possible Student Misconceptions:</p> <ul style="list-style-type: none"> • Students tend to equate life cycles only with the examples they observe in school, such as certain types of plant, butterfly, frog, or mealworm life cycles. When students encounter organisms that are different from the ones they studied, they fail to recognize that all organisms have a life cycle. 					
<p>NJCCS:</p> <ul style="list-style-type: none"> • 5.3.2.A.1 Group living and nonliving things according to the characteristics that they share. • 5.3.2B.1 Describe the requirements for the care of plants and animals related to meeting their energy needs. • 5.3.2D.1 Record the observable characteristics of plants and animals to determine the similarities and differences between parents and their offspring • 5.3.2E.2 Describe how similar structures found in different organisms (e.g., eyes, ears, mouths) have similar functions and enable those organisms to survive in different environments. 					
<p>NGSS Performance Expectations: Students who demonstrate understanding can...</p> <ul style="list-style-type: none"> • K-LS1-1. Use observations to describe patterns of what plants and animals (including humans) need to survive. • 1-LS1-1. Use materials to design a solution to a human problem by mimicking how plants and/or animals use their external parts to help them survive, grow, and meet their needs. • 2-LS4-1. Make observations of plants and animals to compare the diversity of life in different habitats. • 3-LS1-1. Develop models to describe that organisms have unique and diverse life cycles but all have in common birth, growth, reproduction, and death. 					
<p>Primary CCSS ELA/Literacy Connections: RI.1.10 With prompting and support, read informational texts appropriately complex for grade. (1-LS1-2) W.1.7 Participate in shared research and writing projects (e.g., explore a number of “how-to” books on a given topic and use them to write a sequence of instructions). (1-LS1-1)</p>			<p>Primary CCSS Mathematics Connections: MP. 2 Reasons abstractly and quantitatively; MP. 4 Model with mathematics</p>		
Lesson Pace & Sequence					
Lesson Title/Number: Lesson 1 Pre Unit Assessment Getting Ready For Caterpillars		Learning Objective(s): Students will draw a picture that represents their ideas of a caterpillar		Lesson Duration: 40-50 minutes	
<i>Learning Cycle</i>	<i>Learning Activities</i>	<i>Resources/Materials</i>	<i>Science and Engineering Practices</i>	<i>Disciplinary Core Ideas</i>	<i>Crosscutting Concepts</i>

DRAFT - DO NOT COPY - FOR DISCUSSION/FEEDBACK PURPOSES ONLY

<p>What lesson elements will support students' progress towards mastery of the learning objective(s)?</p> <p><i>*Elements do not have to be in conducted in sequence.</i></p>	<p>What specific learning experiences will support ALL students' progress towards mastery of the learning objective(s)?</p>	<p>What curricular resources/materials are available to facilitate the implementation of the learning activities?</p>	<p>What specific practices do students need to use in order to progress towards mastery of the learning objective(s)?</p>	<p>What core ideas do students need to understand in order to progress towards mastery of the learning objective(s)?</p>	<p>What crosscutting concepts will enrich students' application of practices and their understanding of core ideas?</p>
<p>Elicit: How will you access students' prior knowledge?</p>	<p>By conducting a brainstorming session to find out what they already know about caterpillars, using some of the following questions to help focus the discussion: What are caterpillars? What do they look like? Where have you seen caterpillars? What were they doing? What happens to caterpillars? What do caterpillars look like when they are grown? Record responses on the KWL chart</p>	<ul style="list-style-type: none"> • TG - Section 4 - pg.5 • Chart paper • Markers 	<p>Ask questions based on observations to find more information about the natural and/or designed world(s).</p>		
<p>Engage: How will you capture students' interest and get students' minds focused on the concept/topic?</p>	<p>Students will draw a picture of what they think a caterpillar looks like, showing how a caterpillar changes during its life.</p>	<ul style="list-style-type: none"> • Paper • Pencils • Crayons 			
<p>Explore: What hands-on/minds-on common experience(s) will you provide for students?</p>	<p>Students will view a video clip of the metamorphosis of the butterfly and develop questions from their observations. Questions will be recorded on the KWL. Students will then have the opportunity to make changes to their pictures if needed.</p>	<ul style="list-style-type: none"> • Chart paper • Markers • Video clip: http://education.nationalgeographic.com/education/activity/monarch-butterfly-life-cycle-and-migration/?ar_a=1 	<p>Use observations (firsthand or from media) to describe patterns in the natural world in order to answer scientific questions. Asking Questions and Defining Problems</p>	<p>All organisms have external parts. Different animals use their body parts in different ways to see, hear, grasp objects, protect themselves, move from place to place, and seek, find, and take in food, water and air. Plants also have different parts (roots, stems, leaves, flowers, fruits) that help them survive and grow.</p>	
<p>Explain: How will you help students connect their exploration to the concept/topic under investigation?</p>	<p>By reading <i>Monarch Butterfly</i> by Gail Gibbons, the story of the complete life cycle of the monarch, including its annual migration students will be able to build upon what they know and what they have just learned about caterpillars and butterflies.</p>	<ul style="list-style-type: none"> • Storybook <i>Monarch Butterfly</i> by Gail Gibbons 			
<p>Elaborate: How will students apply their learning and develop a more sophisticated</p>	<p>By writing/drawing in their science journals students will record what they have learned</p>	<ul style="list-style-type: none"> • Journals • Pencils • Vocabulary words; butterfly 	<p>Obtaining, Evaluating, and Communicating Information</p>	<p>Animals have body parts that capture and convey different kinds of information needed for</p>	

DRAFT - DO NOT COPY - FOR DISCUSSION/FEEDBACK PURPOSES ONLY

<i>understanding of the concept/topic?</i>	using the vocabulary words.	and caterpillar		growth and survival. Animals respond to these inputs with behaviors that help them survive. Plants also respond to some external inputs.	
Evaluate: How will students demonstrate their mastery of the learning objective(s)?	By evaluating journals and attaching a Rubric score to the entry	<ul style="list-style-type: none"> Teacher made rubric for assessing journals 			
Extend: How will students deepen their conceptual understanding through use in new context?	Students will write about potential problems and solutions to those problems the caterpillars may have living in the classroom.		Use materials to design a device that solves a specific problem or a solution to a specific problem.		
Lesson Title/Number: Caring For Caterpillars/ Lesson 2		Learning Objective(s): Students will use their senses to observe their caterpillars in its new home in a cup.			Lesson Duration: 40-50 minutes
Learning Cycle	Learning Activities	Resources/Materials	Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<p><i>What lesson elements will support students' progress towards mastery of the learning objective(s)?</i></p> <p><i>*Elements do not have to be in conducted in sequence.</i></p>	<p><i>What specific learning experiences will support ALL students' progress towards mastery of the learning objective(s)?</i></p>	<p><i>What curricular resources/materials are available to facilitate the implementation of the learning activities?</i></p>	<p><i>What specific practices do students need to use in order to progress towards mastery of the learning objective(s)?</i></p>	<p><i>What core ideas do students need to understand in order to progress towards mastery of the learning objective(s)?</i></p>	<p><i>What crosscutting concepts will enrich students' application of practices and their understanding of core ideas?</i></p>
Elicit: How will you access students' prior knowledge?	By discussing the caterpillars' foods with the class. Talk about their natural food as well as the prepared food supplied in the cups. Create a Venn Diagram of foods that the caterpillar can eat and foods that we eat.	<ul style="list-style-type: none"> Chart paper Markers 			
Engage: How will you capture students' interest and get students' minds focused on the concept/topic?	By showing students an actual caterpillar to observe, comparing their drawings from the previous lesson (predictions).	<ul style="list-style-type: none"> Caterpillars Hand lens 	Compare predictions(based on prior experiences) to what occurred (observable events)		
Explore: What hands-on/minds-on common experience(s) will you provide for students?	By allowing students to touch, smell and see the food for the caterpillar. Distribute one cup with food and one lid to each child. With clean fingers, the children should now push the food firmly into the bottoms of the cups. Ask them to use their senses for how the food feels, smells and looks. Students will	<ul style="list-style-type: none"> Caterpillar food Cups Hand lens 		All animals need food in order to live and grow. They obtain their food from plants or from other animals.
