LESSON 7

Lesson Title/Number: Changing Environments		Learning Objective(s): How does the environment influence adaptations?			Lesson Duration: 150 minutes
Learning Cycle <i>What lesson elements will support students' progress towards mastery of the learning objective(s)?</i> <i>*Elements do not have to be in conducted in sequence.</i>	Learning Activities <i>What specific learning experiences will support ALL students' progress towards mastery of the learning objective(s)?</i>	Resources/Materials <i>What curricular resources/materials are available to facilitate the implementation of the learning activities?</i>	Science and Engineering Practices <i>What specific practices do students need to use in order to progress towards mastery of the learning objective(s)?</i>	Disciplinary Core Ideas <i>What core ideas do students need to understand in order to progress towards mastery of the learning objective(s)?</i>	Crosscutting Concepts <i>What crosscutting concepts will enrich students' application of practices and their understanding of core ideas?</i>
Elicit: How will you access students' prior knowledge?	Students observe images of different organisms in their environment. Some will be organisms that do not fit the environment. Students will determine at least 3 different questions on the impact of the environment on the organism.	<ul style="list-style-type: none"> Various images of environmental/habitats of organisms using photos or Smartboard tiles. 	Ask questions that arise from careful observation of phenomena, models, or unexpected results, to clarify and/or seek additional information. (MS-LS4-4)	Organisms, and populations of organisms, are dependent on their environmental interactions both with other living things and with nonliving factors. (MS-LS2-1)	

DRAFT - DO NOT COPY - FOR DISCUSSION/FEEDBACK PURPOSES ONLY

<p>Engage: How will you capture students' interest and get students' minds focused on the concept/topic?</p>	<p>Students will engage discussion in how the environment has influence human ability to adapt using questions and images from previous activity.</p>	<ul style="list-style-type: none"> • Various images of environmental/habitats of organisms using photos or Smartboard tiles. 	<p>Constructing Explanations and Designing Solutions</p> <ul style="list-style-type: none"> • Apply scientific ideas to construct an explanation for real-world phenomena, examples, or events. (MS-LS4-4) <p>Engaging in Argument from Evidence</p> <p>Compare and refine arguments based on an evaluation of the evidence presented.</p>	<p>Organisms, and populations of organisms, are dependent on their environmental interactions both with other living things and with nonliving factors. (MS-LS2-1)</p> <p>Adaptation by natural selection acting over generations is one important process by which species change over time in response to changes in environmental conditions. Traits that support successful survival and reproduction in the new environment become more common; those that do not become less common. Thus, the distribution of traits in a population changes. (MS-LS4-6)</p>	<p>Cause and Effect</p> <ul style="list-style-type: none"> • Cause and effect relationships may be used to predict phenomena in natural or designed systems. (MS-LS3-2) • Phenomena may have more than one cause, and some cause and effect relationships in systems can only be described using probability. (MS-LS4-4), (MS-LS4-6)
<p>Explore: What hands-on/minds-on common experience(s) will you provide for students?</p>	<p>Students continue to explore the affects of an environment on organisms. Students use creatures from previous investigation to change the environment and determine its effect. Students will use the adaptation game for choosing the environment.</p>	<ul style="list-style-type: none"> • Student Sheet A6 • Data from A5 • Environmental Cards 	<p>Developing and Using Models</p>	<p>Organisms, and populations of organisms, are dependent on their environmental interactions both with other living things and with nonliving factors. LESSON 8

<p>Lesson Title/Number: Pedigrees and Genetic Disorders</p>	<p>Learning Objective(s): How can a pedigree be used to trace a genetic disorder over generations?</p>	<p>Lesson Duration: 100 minutes</p>
--	---	--

DRAFT - DO NOT COPY - FOR DISCUSSION/FEEDBACK PURPOSES ONLY

<p>Learning Cycle</p> <p><i>What lesson elements will support students' progress towards mastery of the learning objective(s)?</i></p> <p><i>*Elements do not have to be in conducted in sequence.</i></p>	<p>Learning Activities</p> <p><i>What specific learning experiences will support ALL students' progress towards mastery of the learning objective(s)?</i></p>	<p>Resources/Materials</p> <p><i>What curricular resources/materials are available to facilitate the implementation of the learning activities?</i></p>	<p>Science and Engineering Practices</p> <p><i>What specific practices do students need to use in order to progress towards mastery of the learning objective(s)?</i></p>	<p>Disciplinary Core Ideas</p> <p><i>What core ideas do students need to understand in order to progress towards mastery of the learning objective(s)?</i></p>	<p>Crosscutting Concepts</p> <p><i>What crosscutting concepts will enrich students' application of practices and their understanding of core ideas?</i></p>
<p>Elicit: How will you access students' prior knowledge?</p>	<p>Individually students will write 1-2 illness or diseases that more than one member of their family have. Refer to familiar diseases such as asthma, diabetes, sick cell anemia.</p>				
<p>Explore: What hands-on/minds-on common experience(s) will you provide for students?</p>	<p>Participants are challenged to track and record the passage of colored pom poms (representing genes) through generations of a family using a pedigree. Participants learn that common chronic diseases (such as heart disease) run in families and are caused by the combined action of multiple genes.</p>
