

DRAFT - DO NOT COPY - FOR DISCUSSION/FEEDBACK PURPOSES ONLY

Unit Title: Microbiology		Content Area: Biology		Grade Level: 9-12	
<p>Unit Summary: The unit introduces the students to the cells by first evaluating the characteristics of all living things. Students will then differentiate between the major organelles within the cell followed by identifying characteristics that vary amongst different types of cells. The cell membrane and types of transport are then discussed. The final portion of the unit concludes two lab investigations where the students must model osmosis and diffusion and explore how plant and animal cells react in hypertonic and hypotonic solutions. The cross cutting concepts that this unit includes are patterns, cause and effect, scale, proportion and quantity, systems and system models and structure and function. There is a heavy focus within the unit specifically with the structure and function cross cutting concept.</p> <p>Science Practices Addressed: Asking questions (for science) and defining problems (for engineering). Developing and using models, Planning, and carrying out investigations, Analyzing and interpreting data, Using mathematics and computational thinking, Constructing, explanations (for science) and designing solutions (for engineering), Engaging in argument from evidence, Obtaining, evaluating, and communicating information</p> <p>Cross-Cutting Concepts Addressed: Patterns, Cause and Effect, Systems and System Models, and Structure and Function.</p>					
<p>Unit Essential Questions:</p> <ul style="list-style-type: none"> • How does the structure relate to function in living systems from organismal to the cellular level? • What is the difference between prokaryotes and eukaryotes? • What characteristics do all living things have? • How does structure of the cell membrane relate to its function? • How can we model osmosis and diffusion? 			<p>Unit Enduring Understandings:</p> <ul style="list-style-type: none"> • All living things share common characteristics (Specifically: Made of Cells, Cell Specialization, Levels of Organization, and Homeostasis). • The cell membrane is the site of regulation of some cell processes and aids in homeostasis (Specifically: Membrane Structure, Osmosis, Diffusion, and Active Transport). 		
<p>Possible Student Misconceptions: Osmosis and diffusion are the same. Molecules cease to move at equilibrium. Osmosis is limited to mixtures in the liquid state. All living things need water and oxygen. All eukaryotic organisms are multicellular.</p>					
<p>NJCCCS: 5.3.12.A.1, 5.3.12.A.2, 5.3.12.A.3, 5.3.6.A.1,5.3.4.A.1</p>					
<p>NGSS Performance Expectations: <i>Students who demonstrate understanding can...</i></p> <ul style="list-style-type: none"> • HS-LS1-3. Plan and conduct an investigation to provide evidence that feedback mechanisms maintain homeostasis. • HS-LS1-2. Develop and use a model to illustrate the hierarchical organization of interacting systems that provide specific functions within multicellular organisms. 					
<p>Primary CCSS ELA/Literacy Connections: CCSS.ELA-Literacy.WHST.9-10.1, CCSS.ELA-Literacy.WHST.9-10.2, CCSS.ELA-Literacy.WHST.9-10.4, CSS.ELA-Literacy.RI.9-10.1, CCSS.ELA-Literacy.SL.9-10.1, CCSS.ELA-Literacy.SL.9-10.4,</p>			<p>Primary CCSS Mathematics Connections: CCSS.Math.Content.HSS.ID.A.1</p>		
Lesson Pace & Sequence					
<p>Lesson Title/Number: Characteristics of Living things and Homeostasis, Lesson 1</p>		<p>Learning Objective(s): Conclude the characteristics that all living things share by doing quick lab and through class discussion.</p>		<p>Lesson Duration: 80 minutes</p>	
<p style="text-align: center;">Learning Cycle</p> <p style="text-align: center;"><i>What lesson elements will support students' progress towards mastery of the learning objective(s)?</i></p> <p style="text-align: center;"><i>*Elements do not have to be in conducted in sequence.</i></p>	<p style="text-align: center;">Learning Activities</p> <p style="text-align: center;"><i>What specific learning experiences will support ALL students' progress towards mastery of the learning objective(s)?</i></p>	<p style="text-align: center;">Resources/Materials</p> <p style="text-align: center;"><i>What curricular resources/materials are available to facilitate the implementation of the learning activities?</i></p>	<p style="text-align: center;">Science and Engineering Practices</p> <p style="text-align: center;"><i>What specific practices do students need to use in order to progress towards mastery of the learning objective(s)?</i></p>	<p style="text-align: center;">Disciplinary Core Ideas</p> <p style="text-align: center;"><i>What core ideas do students need to understand in order to progress towards mastery of the learning objective(s)?</i></p>	<p style="text-align: center;">Crosscutting Concepts</p> <p style="text-align: center;"><i>What crosscutting concepts will enrich students' application of practices and their understanding of core ideas?</i></p>
<p>Elicit: <i>How will you access students' prior knowledge?</i></p>	<p>Do Now: What characteristics must all living things share?</p>			<p>LS1.A: Structure and Function</p>	<p>Patterns. Observed patterns of forms and events guide</p>

DRAFT - DO NOT COPY - FOR DISCUSSION/FEEDBACK PURPOSES ONLY

<p>Engage: How will you capture students' interest and get students' minds focused on the concept/topic?</p>	<p>KWL Chart: Write what students say they know all living things must have on the board in the knowledge sections of the chart ("K" in KWL). Ask and document what students want to know about the characteristics that all living ("w" in KWL).</p>	<ul style="list-style-type: none"> KWL Chart Template: http://www.eduplace.com/graphicorganizer/pdf/kwl.pdf 	<p>Asking questions (for science) and defining problems (for engineering)</p>		<p>organization and classification, and they prompt questions about relationships and the factors that influence them.</p>
<p>Explore: What hands-on/minds-on common experience(s) will you provide for students?</p>	<p>Students will be asked to go to a series of items around the room (about 10 living and non-living things.) Prior to exploring these items, ask students in small groups to "Discuss the criteria for living things with your group. Come to a consensus on at least five or more necessary characteristics of a living thing." As students go from station to station, they will use the criteria they've developed as a group to determine if the organism is living or nonliving.</p>		<p>Planning and carrying out investigations</p>		<p>Systems and system models. Defining the system under study—specifying its boundaries and making explicit a model of that system—provides tools for understanding and testing ideas that are applicable throughout science and engineering.</p>
<p>Explain: How will you help students connect their exploration to the concept/topic under investigation?</p>	<p>After students have explored each station ask them to now revise their criteria as a group and defend their thoughts to one another using evidence from their stations.</p>		<p>Engaging in argument from evidence</p>		<p>Patterns. Observed patterns of forms and events guide organization and classification, and they prompt questions about relationships and the factors that influence them.</p>
<p>Elaborate: How will students apply their learning and develop a more sophisticated understanding of the concept/topic?</p>	<p>Class Discussion: Characteristics of Living Things. Prior to a formal discussion have students read independently and generate questions.</p>	<ul style="list-style-type: none"> Ch. 1-3 	<p>Asking questions (for science) and defining problems (for engineering)</p>		<p>Stability and change. For natural and built systems alike, conditions of stability and determinants of rates of change or evolution of a system are critical elements of study.</p>
<p>Evaluate: How will students demonstrate their mastery of the learning objective(s)?</p>	<p>Finalize criteria required to assess if an organism is living or nonliving by revising their criteria and the completing the KWL chart.</p>		<p>Obtaining, evaluating, and communicating information.</p>		

DRAFT - DO NOT COPY - FOR DISCUSSION/FEEDBACK PURPOSES ONLY

Extend: How will students deepen their conceptual understanding through use in new context?	Watch and discuss the homeostasis video. Write two discussion questions while watching the movie.	<ul style="list-style-type: none"> Homeostasis Video: http://www.bbc.co.uk/schools/gcsebitesize/science/edexcel/responses_to_environment/homeostasisact.shtml 	Asking questions (for science) and defining problems (for engineering)		
Lesson Title/Number: Introduction to the cell, Lesson 2		Learning Objective(s): Differentiate between prokaryotic cells and eukaryotic cells by completing a Venn diagram and between the different cell organelles by completing a graphic organizer.			Lesson Duration: 80 minutes
<p align="center">Learning Cycle</p> <p align="center"><i>What lesson elements will support students' progress towards mastery of the learning objective(s)?</i></p> <p align="center"><i>*Elements do not have to be in conducted in sequence.</i></p>	<p align="center">Learning Activities</p> <p align="center"><i>What specific learning experiences will support ALL students' progress towards mastery of the learning objective(s)?</i></p>	<p align="center">Resources/Materials</p> <p align="center"><i>What curricular resources/materials are available to facilitate the implementation of the learning activities?</i></p>	<p align="center">Science and Engineering Practices</p> <p align="center"><i>What specific practices do students need to use in order to progress towards mastery of the learning objective(s)?</i></p>	<p align="center">Disciplinary Core Ideas</p> <p align="center"><i>What core ideas do students need to understand in order to progress towards mastery of the learning objective(s)?</i></p>	<p align="center">Crosscutting Concepts</p> <p align="center"><i>What crosscutting concepts will enrich students' application of practices and their understanding of core ideas?</i></p>
Elicit: How will you access students' prior knowledge?	Do Now: Write down as much as you know about the characteristics of a cell.			LS1.A: Structure and Function	
Engage: How will you capture students' interest and get students' minds focused on the concept/topic?	Using a 3-D model or visual of a cell, ask students, "Is this an animal cell or plant cell, defend your response?"		Engaging in argument from evidence		Systems and system models. Defining the system under study—specifying its boundaries and making explicit a model of that system—provides tools for understanding and testing ideas that are applicable throughout science and engineering
Explore: What hands-on/minds-on common experience(s) will you provide for students?	Inquiry Activity, "What is a cell?" Students will be able to form an operational definition of the term cell and classify the cells they observe into two or more groups.	<ul style="list-style-type: none"> Ch. 7-1, Pg. #168 	Constructing explanations (for science) and designing solutions (for engineering)		Structure and function. The way in which an object or living thing is Shaped and its substructure determine many of its properties and functions
Explain: How will you help students connect their exploration to the concept/topic under investigation?	Class Discussion: Prokaryotic cells vs. Eukaryotic Cells (Ch. 7-1) and create a Venn diagram of the two.	<ul style="list-style-type: none"> Prokaryote vs. Eukaryote Venn Diagram: http://www2.mbusd.org/staff/pware/pdf/ProkaryoticEukaryoticVenn.pdf 	Obtaining, evaluating, and communicating information
